#### Assignment 4

My experience working on the assignment was very good. Didn't use any bootstrap theme because I wanted to make my own design this time and it worked out very well. I've been learning a lot from bootstrap theme and decided to implement my own css and js skills in this assignment. It was pretty easy for me as I've been learning and practice a lot of php along with js. In this assignment I used php to render the .csv file and display the data. Didn't had any issues with cache and cookies when I was using xxamp this time. Overall experience was very good with this assignment.
